

• LINKEDIN FOUNDER PLAYBOOK

30 Days to Your First 50 CFO Followers

A done-for-you content engine for the founder of DataByt
— every post written, every technique explained, so you
learn to write your own.

Built for: Kuberan N · Founder, DataByt

Market: USA & EU mid-market B2B CFOs

Goal: 50 CFO followers by Day 31 · First pilot by Day 60

How to Use This Playbook

This isn't just 20 posts. It's a 30-day training program. Each post is followed by a **breakdown** that teaches you the hook technique, the psychology, and the structure — so by Day 30 you can write your own without help.

Your daily 5 steps

#	Action	Why
1	Post the day's content at 7:30–8:30am ET	When US CFOs check LinkedIn
2	Reply to every comment within 90 min	Engagement velocity = reach
3	Comment on 8 CFO/finance posts	Their audience becomes yours
4	Send 10 CFO connection requests + 1-line note	This is what actually hits 50 followers
5	Read the breakdown for tomorrow's post	Learn the technique before you post it

The #1 truth: Posts build credibility. The connect-and-comment routine builds the following. ~70% of your 50 CFOs will come from Step 3 & 4 — not the posts. Run both every weekday.

How to read each post's breakdown

- 🔥 **Hook Technique** — the exact device used in line 1 and why it stops the scroll
- 💡 **Why It Works** — the psychology that makes a CFO engage
- 📄 **Structure** — the skeleton, so you can refill it with new ideas
- 💡 **Steal This** — the one transferable move to reuse in your own posts

The pillar mix (Month 1 = Authority Phase)

Pillar	Share	Its job
Pain points	45%	Make CFOs feel seen → engage & share
Education	30%	Prove you know AR cold → carousels
Founder journey	20%	Make them follow you

The 30-Day Calendar

5 posts per week, weekdays only. Quality over quantity — one strong post beats three rushed ones. Same weekly skeleton so you never face a blank page.

Week	Mon	Tue	Wed	Thu	Fri
1	Manifesto	Carousel: 5 Metrics	Pain story	Pain: data	Poll
2	Pain: time	Carousel: DSO	Founder: BIP	Pain: relationships	Bold take
3	Pain: profitable-broke	Carousel: CEI	Founder: mistake	Pain: CFO's job	Poll
4	Pain: spreadsheets	Carousel: dunning	Founder: vision	Education: automate	Bold + CTA

The weekly rhythm explained

- **Monday** — open the week on a wound (pain). People are back at work feeling the problem.
- **Tuesday** — your education carousel. Highest save-rate day. Builds authority.
- **Wednesday** — founder journey. Mid-week humanizing. Makes them root for you.
- **Thursday** — pain again. Thursday is peak B2B reach on LinkedIn.
- **Friday** — poll or bold take. Engagement spike heading into the weekend.

Carousel rule: Only once a week, education only. They take longer to make and get bookmarked, not just liked. Don't try to do them daily — quality drops and you burn out.

WEEK 1

Authority + Problem — establish that you know AR cold

📌 Your anchor post — pin this to your profile

THE POST

82% of businesses that fail were profitable.

They didn't run out of customers.

They ran out of cash — waiting on invoices that customers never paid on time.

I've watched it happen. A company does everything right. Great product. Happy clients. And then one big client pays 90 days late, and suddenly payroll is at risk.

That's not a business problem.

That's a systems problem.

So I'm building DataByt — AI that chases your overdue invoices automatically, so finance teams stop spending 10 hours a week sending reminders by hand.

No collections agency. No new hires. Just your unpaid invoices, handled.

I'm going to build this in public — the wins, the mistakes, what I learn from finance leaders along the way.

If you run finance at a B2B company and late payments are quietly killing your cash flow — follow along. This is for you.

 CFOs, founders, VP Finance

#CashFlow

#AccountsReceivable

#B2B

#FinanceLeadership

#StartupJourney

🎓 BREAKDOWN — learn from this one

👉 HOOK TECHNIQUE — SHOCKING STATISTIC

Line 1 is a counterintuitive number ("82% of failed businesses were profitable"). It breaks a belief — we assume failed = unprofitable. Broken assumptions force the brain to keep reading for resolution.

💡 WHY IT WORKS

It reframes a problem the reader already fears (failure) and blames a system, not them. CFOs feel relief + recognition. That emotion = the comment and the follow.

📄 STRUCTURE

Stat → reframe → micro-story → "not X, it's Y" pivot → what you're building → CTA to follow. This is the classic manifesto skeleton.

💡 STEAL THIS

The "That's not a ___ problem. That's a ___ problem." line. It's a thought-reversal that makes any point feel profound. Reuse it across topics.

Carousel: "5 Numbers Every CFO Should Watch"

THE CAPTION

Most finance teams track revenue and call it a day.

But revenue doesn't tell you if you'll actually get paid.

These 5 numbers do. Swipe through 🖱️

Which one does your team actually track? 🗨️

THE 7 SLIDES (BUILD IN CANVA, INDIGO BRAND)

- 1 · 5 Numbers Every CFO Should Watch to Fix Cash Flow
- 2 · DSO — Days Sales Outstanding. Avg days to collect. Healthy: under 45.
- 3 · CEI — Collection Effectiveness Index. Of what you could collect, how much you did. Healthy: 80%+.
- 4 · Overdue % of AR — What share is past due. Above 30%? Act now.
- 5 · Avg Days Delinquent — How late your late invoices are. Rising = customers training you to wait.
- 6 · Bad Debt Ratio — What you'll never collect. Keep under 1.5%.
- 7 · Track these by hand → or let DataByt track all 5 live. databyt.in

👤 CFOs, Controllers, FP&A, AR managers

#DSO

#CFO

#FinanceMetrics

#AccountsReceivable

#CashFlowManagement

🎓 BREAKDOWN

👉 HOOK TECHNIQUE — PATTERN INTERRUPT

"Most teams track revenue and call it a day" calls out a comfortable habit, then immediately undercuts it. Mild accusation → reader checks "is that me?"

💡 WHY IT WORKS

Carousels are saved, not just liked. A "5 things" list promises finite, useful value — high save rate. Saves & shares are the strongest reach signals on LinkedIn.

📄 STRUCTURE

Caption = hook + promise + question. Slides = title → one idea per slide → soft product slide last. Always end a carousel with a question in the caption to drive comments.

💡 STEAL THIS

The "X things every [role] should [verb]" format is the most reliable carousel template in existence.
Swap the noun, keep the skeleton.

The cash-flow death story

THE POST

A founder I spoke with last month couldn't make payroll.

He wasn't broke.

\$340,000 was sitting in unpaid invoices — money his customers owed but hadn't sent.

He'd been emailing reminders for 11 weeks. Politely. One at a time. Between everything else he had to do.

Here's what struck me: he felt embarrassed. Like he had failed.

He didn't fail. The system failed him. There's no reason a human should be manually chasing 60 invoices in 2026.

Your cash shouldn't depend on whether someone remembered to send a follow-up email.

If this is you — you're not bad at finance. You just don't have the right system yet.

Founders, CFOs in the manual grind

#CashFlow

#AccountsReceivable

#SmallBusiness

#Finance

#B2B

BREAKDOWN

HOOK TECHNIQUE — IN MEDIAS RES (DROP INTO A TENSE MOMENT)

"A founder couldn't make payroll" opens mid-crisis. No setup. The reader is instantly inside a high-stakes moment and needs to know how it resolves.

WHY IT WORKS

This is storytelling: a real person + tension + emotional detail ("he felt embarrassed"). Emotion is what makes a post memorable and shareable. The close absolves the reader of blame — pure relief.

STRUCTURE

Tense moment → the twist (not broke) → specific number → emotional beat → reframe → reassurance to reader. Specificity (\$340K, 11 weeks, 60 invoices) makes it believable.

STEAL THIS

Always use real, odd-specific numbers (\$340,000, not "a lot"). Specificity = credibility. Round numbers feel invented.

The trapped-cash math

THE POST

Late payments cost US businesses over \$3 trillion in tied-up cash at any given moment.

Not lost money. Trapped money. Yours — sitting in someone else's bank account, earning them interest instead of you.

The average B2B invoice in the US is paid 14 days late. For SMBs, it's worse.

Now do the math on your own AR:

- How much is outstanding right now?
- What's 14+ days late?
- What could you do with that cash today?

Most CFOs have never run that number. When they do, it changes how seriously they take collections.

What's your DSO right now? Be honest. 📌

 CFOs, finance leaders

 #DSO

 #WorkingCapital

 #CFO

 #CashFlow

 #B2BFinance

BREAKDOWN

HOOK TECHNIQUE — BIG NUMBER + REFRAME

"\$3 trillion" is huge and abstract — then "Not lost money. Trapped money. Yours." makes it personal and concrete in three short fragments.

WHY IT WORKS

It moves from macro (industry stat) to micro ("your own AR") and ends with a direct question that demands self-reflection. Self-reflection questions = comments, and comments = reach.

STRUCTURE

Macro stat → reframe → supporting stat → 3 self-audit questions → insight → direct question CTA. The arrow bullets (→) create skimmable rhythm.

STEAL THIS

End pain posts with a question the reader can answer about themselves ("What's your DSO?"). It converts passive readers into commenters.

AR headache poll

THE POST (USE LINKEDIN'S NATIVE POLL FEATURE)

Poll: What's your biggest accounts receivable headache?

I'm building AR software and talking to finance leaders every week. Curious what actually frustrates you most.

- ☐ Chasing invoices manually
- ☐ Customers who always pay late
- ☐ No visibility into what's overdue
- ☐ Disputes that drag on forever

Whatever you pick — drop a comment on why. I read every one.

 CFOs, AR managers, finance teams

[#AccountsReceivable](#)

[#Finance](#)

[#CFO](#)

[#Poll](#)

[#CashFlow](#)

BREAKDOWN

HOOK TECHNIQUE — LOW-FRICTION PARTICIPATION

A poll asks for one tap, not a comment. The barrier to engage is near zero, so participation is high — and LinkedIn rewards polls with extra reach.

WHY IT WORKS

Double win: (1) huge reach to non-followers, (2) free market research for you. The "comment why" line upgrades taps into comments, which boost reach further.

STRUCTURE

Question → why you're asking (positions you as a builder) → 4 tight options → "comment why" ask. Keep options to 4; LinkedIn's max and the readable limit.

STEAL THIS

Run a poll every 1–2 weeks. It's the cheapest reach on LinkedIn and doubles as customer discovery you'd otherwise pay for.

WEEK 2

Deepen authority — show range across pain, education, and journey

A robot's job, done by a human

THE POST

Your finance team spends ~10 hours a week chasing invoices.

That's a quarter of someone's job. Gone. Spent copy-pasting reminder emails and updating a spreadsheet.

And the brutal part? Manual chasing doesn't even work well:

- Reminders go out late, inconsistently
- The squeaky customers get chased, the quiet late-payers slip through
- Nobody's tracking who got which email when

You're paying a skilled finance person to do a robot's job — badly — because the robot didn't exist.

It does now. That's the whole reason I'm building DataByt.

 CFOs, finance managers who own AR

#Finance

#Automation

#AccountsReceivable

#Productivity

#CFO

BREAKDOWN

HOOK TECHNIQUE — SPECIFIC COST CALCULATION

"10 hours a week" → "a quarter of someone's job." Translating a vague waste into a concrete cost makes the reader feel the loss.

WHY IT WORKS

"A robot's job — badly — because the robot didn't exist" is a sharp, quotable line that positions your product as the obvious fix without a hard pitch.

STRUCTURE

Cost stat → reframe as wasted salary → 3 reasons manual fails → the killer line → 1-sentence product tie. Keep the product mention to a single closing line.

STEAL THIS

Convert time waste into money/headcount ("a quarter of a salary"). CFOs think in cost — speak their unit.

Carousel: "Your DSO Is Lying to You"

THE CAPTION

Your DSO looks fine. Your cash flow says otherwise.

Here's why the number on your dashboard might be hiding the truth 🙌

THE 7 SLIDES

- 1 · Your DSO Is Lying to You — Here's How
- 2 · The trap: one big on-time customer can mask 20 late ones in the average.
- 3 · Fix 1: Track Best Possible DSO vs actual — the gap is your real problem.
- 4 · Fix 2: Segment DSO by customer size. Your whales hide your stragglers.
- 5 · Fix 3: Watch the trend, not the number. Rising DSO = trouble coming.
- 6 · Fix 4: Pair DSO with CEI. DSO = "how long," CEI = "how well."
- 7 · DataByt shows real DSO, segmented + trending, live. databyt.in

 CFOs, Controllers, FP&A

#DSO

#FinanceLeadership

#CashFlow

#CFO

#AccountsReceivable

BREAKDOWN

HOOK TECHNIQUE — CONTRADICTION

"Your DSO looks fine. Your cash flow says otherwise." Two clashing facts create a gap the reader needs closed.

WHY IT WORKS

"Lying to you" is provocative about a number they trust. Challenging a trusted metric signals deep expertise — only an insider knows where the metric breaks.

STRUCTURE

Contradiction caption → "the trap" slide → 4 numbered fixes → product slide. Numbered fixes make it actionable and screenshot-worthy.

STEAL THIS

"[Thing they trust] is lying to you" is a top-tier hook for any educational post. It promises insider knowledge.

3-week honest update

THE POST

3 weeks into posting about AR collections. Honest update:

What's working:

- Finance leaders are replying to my DMs with real frustrations. Gold.
- One Controller told me their "system" is a color-coded spreadsheet and prayer. I've heard this 4 times now.

What's hard:

- Posting daily when you'd rather be in the codebase.
- Saying things publicly before you have 1,000 customers to "prove" you're right.

What I'm learning:

- CFOs don't want another dashboard. They want the work done. The collections to just... happen.

That insight is reshaping how I'm building DataByt. Building in public actually works — you tell me what to build.

What would make you trust an AI to chase your invoices? Genuinely asking. 🙌

👤 CFOs, founders, build-in-public crowd

#BuildInPublic

#StartupJourney

#Fintech

#AccountsReceivable

#Founders

🎓 BREAKDOWN

👉 HOOK TECHNIQUE — TRANSPARENCY MARKER

"Honest update:" signals vulnerability and earns attention. People stop for honesty because most content is polished spin.

💡 WHY IT WORKS

The Working / Hard / Learning structure shows you're human and listening. Admitting what's "hard" builds more trust than any win. Ends asking for the trust objection — turns readers into co-builders.

📄 STRUCTURE

Time marker → 3 labeled buckets (Working/Hard/Learning) → the insight → question CTA. The buckets make a personal update feel organized and credible.

💡 STEAL THIS

The "What's working / What's hard / What I'm learning" template is a repeatable founder post you can run monthly forever.

Collections is a relationship problem

THE POST

Chasing a late invoice the wrong way can cost you the customer.

Too soft → they ignore you for another month.

Too aggressive → you damage a relationship you spent years building.

This is the part nobody talks about: collections isn't just a cash problem, it's a relationship problem.

The best AR teams escalate in tone deliberately:

→ Day 1 late: friendly nudge, assume they forgot

→ Day 10: firm, clear deadline

→ Day 30: serious, but offer a path (payment plan)

Most teams can't do this consistently by hand. So they either nag or avoid. Both cost you.

Getting tone right at scale is exactly the problem I'm obsessed with solving.

 CFOs, AR managers, account managers

#AccountsReceivable

#CustomerRelationships

#Finance

#Collections

#B2B

BREAKDOWN

HOOK TECHNIQUE — COST / CONSEQUENCE

"...can cost you the customer" opens with a stakes-raising consequence. Loss aversion: people fear losing a customer more than they want a faster payment.

WHY IT WORKS

"The part nobody talks about" frames you as the one revealing a hidden truth. Then you teach a real framework (tone escalation) — value + authority in one post.

STRUCTURE

Consequence hook → the two-sided trap (soft/aggressive) → "nobody talks about" reframe → the L1/L2/L3 framework → product philosophy close.

STEAL THIS

"This is the part nobody talks about" instantly elevates ordinary advice into insider insight. Use before any non-obvious point.

AR software wasn't built for you

THE POST

Unpopular opinion: AR software wasn't built for you.

HighRadius, Billtrust, the enterprise giants — they were built for Fortune 500 finance departments with 6-figure budgets and a team to run them.

If you're a \$5M–\$50M B2B company, your options have been:

1. Pay enterprise prices for enterprise complexity you don't need
2. Hire a collections agency that takes a cut and torches relationships
3. Do it by hand in a spreadsheet

That's not a real choice. The entire mid-market has been ignored.

That gap is why DataByt exists. AR automation that a finance team of 1–3 can actually run, at a price that isn't insane.

The mid-market deserves better tools. Agree or disagree? 📌

Mid-market CFOs priced out of enterprise tools

#Fintech

#MidMarket

#AccountsReceivable

#CFO

#B2BSaaS

🎓 BREAKDOWN

👉 HOOK TECHNIQUE — DECLARED CONTRARIAN ("UNPOPULAR OPINION")

Flagging a take as "unpopular" primes people to debate it. Debate = comments = reach. It signals you'll say something others won't.

💬 WHY IT WORKS

It names a common enemy (enterprise tools) and sides with the underdog (the reader). People rally behind a builder fighting for them. "Agree or disagree?" explicitly invites the comment.

📐 STRUCTURE

Contrarian claim → name the villains → the 3 bad options → "not a real choice" → your alternative → debate-inviting CTA.

STEAL THIS

Naming a clear enemy (a category, not a person) creates an "us vs them" that builds tribe. Use sparingly — ~1 bold take per week.

WEEK 3

Sharpen the wound — mindset shifts + your first vulnerability post

Profit you can't collect isn't profit

THE POST

"We're profitable on paper but I can't sleep."

A CFO said this to me last week. It's the most common contradiction in B2B finance.

Profit is an accounting number. Cash is reality.

You can be profitable and still:

- Miss payroll
- Delay your own vendors
- Turn down growth because there's no cash to fund it

...all because your receivables are stuck.

Profit you can't collect isn't profit. It's a promise. And promises don't make payroll.

The fastest lever most SMBs ignore? Collecting what they're already owed, faster. No new sales required.

 CFOs, founders, finance leaders

#CashFlow

#Profitability

#CFO

#WorkingCapital

#Finance

BREAKDOWN

HOOK TECHNIQUE — QUOTE OPEN

Opening with a raw human quote ("I can't sleep") is instantly relatable and concrete. Quotes feel like eavesdropping — irresistible.

WHY IT WORKS

"Profit is an accounting number. Cash is reality." is a quotable aphorism. The post reframes a belief (profit = health) into a sharper truth (cash = health).

STRUCTURE

Quote → "most common contradiction" → aphorism → list of consequences → the killer line → the takeaway lever.

STEAL THIS

Coin short aphorisms ("Profit you can't collect is a promise"). They're the lines people re-share and quote you on.

Carousel: "CEI — The Metric Better Than DSO"**THE CAPTION**

Everyone tracks DSO. Almost nobody tracks the metric that actually measures if your collections work.

Meet CEI 👉

THE 7 SLIDES

- 1 · CEI: The Collections Metric You're Probably Ignoring
- 2 · What it is: Of the money you could have collected this period, how much you actually did.
- 3 · The formula: $(\text{Collected} \div \text{Collectible}) \times 100$
- 4 · Why it beats DSO: DSO is distorted by sales swings. CEI isn't — pure collections performance.
- 5 · The benchmark: 80%+ is healthy. Under 80% = your process is leaking cash.
- 6 · The move: Track CEI monthly. Falling CEI = fix collections now, before DSO even shows it.
- 7 · DataByt calculates your CEI live, automatically. databyt.in

 CFOs, Controllers, FP&A

#CEI

#DSO

#FinanceMetrics

#AccountsReceivable

#CFO

** BREAKDOWN**** HOOK TECHNIQUE — INSIDER GAP ("EVERYONE VS ALMOST NOBODY")**

Contrasts what the crowd does (DSO) with what the smart few do (CEI). Reader wants to be in the smart few — so they swipe.

** WHY IT WORKS**

Teaching a metric most people don't track instantly makes you the most knowledgeable voice in their feed that day. Authority by lesser-known value.

** STRUCTURE**

Gap caption → what/formula/why/benchmark/action across slides → product slide. Including the formula makes it a save-worthy reference.

** STEAL THIS**

Teach the lesser-known metric, not the obvious one. Everyone posts "DSO 101." Owning the deeper metric = owning the expert position.

I almost built the wrong product

THE POST

I almost built the wrong product.

My first version of DataByt was a beautiful analytics dashboard. Charts, trends, AR aging, the works.

Then a finance leader looked at it and said:

"This is nice. But I don't need to see the problem better. I need it gone. Stop showing me overdue invoices — go collect them."

That sentence rebuilt my entire product.

CFOs don't want another dashboard to check. They want the collections to happen without them. The reminders sent. The disputes flagged. The work done.

So I rebuilt DataByt to act, not just report. AI that sends the emails, escalates the tone, flags the disputes — automatically.

Best feedback I ever got. From someone who'll probably never know they changed the whole product.

 CFOs, founders, product people

[#BuildInPublic](#)

[#ProductDevelopment](#)

[#StartupLessons](#)

[#Fintech](#)

[#Founders](#)

BREAKDOWN

HOOK TECHNIQUE — CONFESSION

"I almost built the wrong product" is an admission of near-failure. Confessions disarm the reader and feel honest in a feed full of bragging.

WHY IT WORKS

The customer quote is the hero, not you. Showing you changed direction because of a customer proves you listen — the #1 trait buyers want in a vendor.

STRUCTURE

Confession → the wrong version → the pivotal quote → "that rebuilt the product" → the lesson generalized → humble close.

STEAL THIS

Let a customer's quote carry the insight. Quoting them (not yourself) is more credible and makes you look like a listener, not a know-it-all.

The board-meeting fear

THE POST

Nothing makes a CFO look worse in a board meeting than a cash flow surprise.

"Why is cash down when revenue is up?"

The answer is almost always the same: receivables. The money was earned. It just wasn't collected.

And the CFO ends up defending a number that isn't even about their performance — it's about whether 40 customers paid on time.

Strong AR isn't just an ops task. It's how a CFO protects their own credibility.

Predictable collections = predictable cash = a board that trusts you.

That's the real product I'm building: not "collections software," but a CFO who never gets blindsided again.

 CFOs, VP Finance

#CFO

#FinanceLeadership

#CashFlow

#BoardMeetings

#AccountsReceivable

BREAKDOWN

HOOK TECHNIQUE — STATUS/FEAR TRIGGER

"Look worse in a board meeting" hits professional status fear — the most powerful motivator for senior leaders. It's personal, not just operational.

WHY IT WORKS

It elevates AR from a boring task to a career-protection issue. When you connect your product to the buyer's personal stakes (credibility), urgency skyrockets.

STRUCTURE

Fear scenario → the dreaded question → root cause → the unfairness → reframe (ops → credibility) → equation → product as identity ("a CFO who never gets blindsided").

STEAL THIS

Sell the personal stakes, not the feature. "A CFO who never gets blindsided" beats "real-time AR analytics" every time.

How does your team handle collections?

THE POST (NATIVE POLL)

Poll: How does your team currently handle collections?

No judgment — just genuinely mapping how mid-market finance teams do this in 2026.

- ☐ Manually (email + spreadsheet)
- ☐ A collections agency
- ☐ Built-in QuickBooks/Xero reminders
- ☐ Dedicated AR software

If you picked manual — you're the majority. And that's exactly the problem. 📌

 CFOs, AR managers, Controllers

 #AccountsReceivable

 #Finance

 #Poll

 #CFO

 #Collections

🎓 BREAKDOWN

🔗 HOOK TECHNIQUE — SAFE PARTICIPATION ("NO JUDGMENT")

"No judgment" lowers the guard so people answer honestly — including the slightly embarrassing "manual" option. More honesty = more votes.

💡 WHY IT WORKS

The closing line plants your narrative ("manual is the problem") without preaching — the data does the arguing for you. You'll also get a real market snapshot.

📐 STRUCTURE

Question → safety + purpose framing → 4 realistic options → narrative-planting close. Note the options double as competitor mapping.

💡 STEAL THIS

Design poll options so the "majority answer" reinforces your thesis. The crowd's vote becomes your argument.

WEEK 4

Convert attention to trust — vision, and your first soft CTA

Karen in accounting

THE POST

Your AR process is a spreadsheet and a good memory.

Be honest. For most mid-market companies, "the system" is:

- A spreadsheet someone updates (when they remember)
- A mental note to "follow up with that client"
- A pile of reminders that go out whenever there's time

It works... until the person who holds it all in their head goes on vacation. Or quits. Or just has a busy week.

Your cash flow shouldn't have a single point of failure named "Karen in accounting."

Collections should be a system, not a person's memory. That's the entire bet behind DataByt.

 CFOs, finance ops, founders

#Finance

#AccountsReceivable

#Automation

#SmallBusiness

#CFO

BREAKDOWN

HOOK TECHNIQUE — UNCOMFORTABLE MIRROR

"A spreadsheet and a good memory" describes the reader's reality so accurately it stings a little. Recognition = "this is literally us."

WHY IT WORKS

Humor ("Karen in accounting") makes a serious risk (single point of failure) shareable. People share posts that are both true and funny.

STRUCTURE

Mirror hook → "be honest" + the 3-part reality → the failure scenario → the funny-but-true line → the principle → 1-line product bet.

STEAL THIS

One concrete, slightly funny image ("Karen in accounting") sticks better than ten abstract points.
Specific > generic, always.

Carousel: "Dunning Email Mistakes Costing You Cash"

THE CAPTION

Most reminder emails make customers pay later, not sooner.

Here are the 5 mistakes — and what to do instead 🙌

THE 7 SLIDES

- 1 · 5 Dunning Email Mistakes That Delay Payment
- 2 · Mistake 1: Same tone every time. Escalate: friendly → firm → final.
- 3 · Mistake 2: Burying the ask. State amount, invoice, deadline up top.
- 4 · Mistake 3: No payment link. Every extra click = another day of delay.
- 5 · Mistake 4: Inconsistent timing. Late, random reminders signal you don't track it.
- 6 · Mistake 5: One email per invoice. Batch all overdue invoices per customer into one.
- 7 · DataByt does all 5 automatically — right tone, right time. databyt.in

 AR managers, CFOs, finance teams

#Collections

#AccountsReceivable

#EmailStrategy

#Finance

#CFO

BREAKDOWN

HOOK TECHNIQUE — COUNTERINTUITIVE CLAIM

"Reminders make customers pay later" reverses the assumption that reminders help. The surprise pulls the swipe.

WHY IT WORKS

Mistake-format carousels are catnip — readers check if they're guilty of each one. Immediately actionable = high save rate. And every "fix" is quietly a DataByt feature.

STRUCTURE

Counterintuitive caption → 5 mistakes (each = problem + fix) → product slide. "Mistakes you're making" outperforms "tips" because it triggers self-checking.

STEAL THIS

"X mistakes costing you ___" beats "X tips for ___." Loss-framing (mistakes) outpulls gain-framing (tips) almost every time.

The 10-year vision — the "movement" post

THE POST

I don't think "accounts receivable" should exist as a job in 10 years.

Not the people — the manual grind. The chasing. The copy-pasting. The spreadsheet babysitting.

Think about it: a business does the hard part — wins the client, delivers the work, earns the money. And then a human has to spend hours begging for what's already owed?

That's broken. And it's exactly the kind of work AI should absorb completely.

My bet for the next decade: collections becomes invisible. Money earned becomes money collected — automatically. Finance teams get promoted from "invoice chasers" to actual strategists.

That's the future I'm building DataByt toward. Not a tool. A world where late payments stop quietly killing good businesses.

Big vision. I know. But someone has to build it.

 CFOs, founders, future-of-finance crowd

#FutureOfFinance

#AI

#Fintech

#Vision

#AccountsReceivable

BREAKDOWN

HOOK TECHNIQUE — BOLD PREDICTION

"AR shouldn't exist as a job in 10 years" is a provocative future claim. Predictions invite both agreement and pushback — both drive comments.

WHY IT WORKS

This is the "movement" post. You're not selling software, you're describing a better world. People follow missions, not products. It elevates you from vendor to visionary.

STRUCTURE

Bold prediction → clarify (the grind, not people) → the absurdity of today → "AI should do this" → the 10-year bet → "not a tool, a world" → humble-bold close.

STEAL THIS

"Not a tool. A world where ____." Zoom out from product to mission. Run a vision post roughly monthly to keep recruiting believers.

Automate vs hire

THE POST

When collections get out of hand, most companies do the expensive thing: hire.

A collections agency takes 10–25% of what they recover — and often torches the customer relationship doing it.

A new AR hire costs \$50K–\$70K/year, plus ramp time, plus they still do it manually.

Both are 2010 answers to a 2026 problem.

The third option: automate the repetitive 80% — the reminders, the escalation, the tracking — and let your existing team handle the 20% that actually needs a human (negotiations, disputes, relationships).

You don't need more people chasing invoices. You need the chasing to happen without people.

That math is why mid-market finance is about to change fast.

 CFOs evaluating how to scale collections

BREAKDOWN

HOOK TECHNIQUE — NAME THE DEFAULT MISTAKE

"Most companies do the expensive thing: hire." Calling the common move a mistake makes the reader want the smarter alternative you're about to give.

WHY IT WORKS

It reframes the buying decision in your favor (automate vs hire) using the buyer's own cost logic, with real numbers. "2010 answers to a 2026 problem" is a sticky line.

STRUCTURE

Default mistake → cost of option A → cost of option B → "old answers" line → the 80/20 third option → the principle → market-shift close.

STEAL THIS

Frame your product as "the third option" against two expensive defaults. It positions you as the obvious smart choice without a hard sell.

Month-1 recap + your first pilot offer

THE POST

One month ago I started posting about a deeply unsexy topic: getting B2B companies paid on time.

Here's what I've learned from you:

- Almost everyone is still doing collections by hand
- CFOs don't want dashboards, they want the work gone
- "Profitable but cash-strapped" is the most common pain in the mid-market
- Nobody built a serious AR tool for companies under \$100M — until now

I built DataByt to fix exactly this. AI that chases your overdue invoices automatically — right tone, right time, connected to QuickBooks, Xero, NetSuite, or Sage. Live in 48 hours.

I'm onboarding a small group of finance teams to use it free while we gather feedback and results.

If your team is still chasing invoices manually and you want in — comment "AR" or DM me. I'll show you what it looks like.

Either way — thank you for the first month. This is just the start.

BREAKDOWN

HOOK TECHNIQUE — VULNERABLE TIME-ANCHOR

"One month ago I started... a deeply unsexy topic" is humble and self-aware. It earns goodwill before any ask — so the CTA doesn't feel salesy.

WHY IT WORKS

By Day 20 the audience is warm. Recapping shared learnings ("what I learned from you") makes them co-owners. The CTA is soft (free pilot, comment a word) and low-risk — the right ask after a month of pure value.

STRUCTURE

Time anchor → 4 learnings (social proof of insight) → product in one tight line → the free-pilot offer → frictionless CTA ("comment AR") → gracious close.

STEAL THIS

"Comment [word]" CTAs outperform "DM me" — they're public (social proof) and low-effort. Then DM everyone who comments.

Who to Follow (exact list)

Follow all of these. Turn on the 🔔 bell for the ⭐ starred ones so you can comment early on their posts (early comments = more visibility).

LinkedIn writing & growth craft

- ⭐ **Justin Welsh** — the gold standard for solo-founder LinkedIn content
- **Jasmin Alić ("Jay")** — LinkedIn writing coach; hooks & formatting
- **Lara Acosta** — personal branding on LinkedIn
- **Ruben Hassid** — AI + LinkedIn growth

Finance / CFO thought leaders (your niche & audience)

- ⭐ **Anders Liu-Lindberg** — the biggest finance business-partnering voice on LinkedIn
- ⭐ **Ben Murray (The SaaS CFO)** — SaaS finance, very active
- **Glenn Hopper** — finance + AI
- **Christian Wattig** — FP&A education
- **CJ Gustafson (Mostly Metrics)** — CFO metrics, newsletter + LinkedIn

Communities to join (where US/EU CFOs gather)

- ⭐ **CFO Connect** (by Spendesk) — large, active CFO community
- **Pavilion** — finance & ops leaders
- **The SaaS CFO community**

AR competitors to watch (study messaging, don't copy)

- **Tesorio · Versapay · HighRadius · Billtrust · Upflow · Kolleno**

Fintech brands with great content (model the style)

- **Ramp · Mercury · Bill.com · Tipalti · Datarails**

Engineer Your Feed + Expectations

Turn your feed into an AR/finance intelligence stream (15 min today)

#	Action
1	Follow everyone on the previous page — <i>follow</i> + 🔔 on the starred
2	Connect with 20 CFOs now: search "CFO" OR "VP Finance" OR "Controller", filter US / UK / EU, 2nd-degree
3	For 2 weeks, like/comment ONLY on finance content — it trains the algorithm on who you are
4	On irrelevant posts: ... → "I don't want to see this." Prune ruthlessly
5	Save a search for "accounts receivable" / "DSO", sort by recent, check daily for posts to comment on
6	Join 2–3 finance groups + the CFO Connect community

What to actually expect (so you don't quit early)

Days 1–14: Almost no traction. 5–20 likes per post. This is normal and everyone goes through it. Do NOT change strategy. Keep posting.

Days 15–30: Momentum starts. A post or two breaks out. Connection requests get accepted. CFOs begin following.

50 CFOs by Day 31: Achievable — but ~70% comes from the connect + comment routine, not the posts. Run both every weekday without fail.

First pilot by Day 60: Realistic if you post the Day-20 pilot CTA and follow up with everyone who comments or accepts, in the DMs.

The only variable that matters

The posts are written. The plan is built. The follow list and routine are set. The one thing left is whether you **show up every weekday for 30 days** — post, reply, comment, connect. That consistency is the entire game. Most founders quit at week 3 when 4 people like their post. The ones who win simply don't.

REMEMBER

Posts build credibility. The routine builds the following. Run both, daily, for 30 days. Then judge.
