

Days 21–40

The Trust Phase

Month 2 of your content engine — 20 more posts that deepen authority, bring your real CFO conversations into the feed, and warm the audience toward the pilot. Each post + the technique that makes it work.

For: Kuberan N · Founder, DataByt · US/EU mid-market B2B CFOs · Continues from Month 1 (Days 1–20)

Month 2 — What Changes

Month 1 built authority (heavy pain + education) to make CFOs trust that you know AR. Month 2 keeps that, but shifts the mix toward **founder voice and real conversations** — and starts warming the audience toward the free pilot. You are no longer a stranger with good tips; you're a founder they've watched for a month.

The Month-2 pillar mix

Pillar	Share	Why now
Pain points	40%	Still the engine of engagement
Education	25%	Carousels keep proving expertise
Founder journey	25%	Up from 20% — they follow <i>you</i> now
Bold take / poll / CTA	10%	Begin the soft conversion

The calendar (Weeks 5–8)

Wk	Mon	Tue	Wed	Thu	Fri
5	DSO drift	Carousel: 7 levers	30-day update	Write-off math	Poll: your DSO
6	One person's memory	Carousel: dunning	CFO conversation	Concentration risk	Bold: agencies
7	Payroll Friday	Carousel: 5 signs	I was wrong	Net 60	Poll: hours
8	Early-pay discounts	Carousel: month-end	Boring problems	AI promotes you	Recap + CTA

Reminder: the posts build credibility; the daily **connect + comment routine** builds the following. Keep both running — 10 CFO connection requests + 8 thoughtful comments every weekday. By Day 40 you should be well past 50 followers and starting real conversations.

WEEK 5

Authority compounds — and you mark the 30-day milestone

DAY 21 · MON — Pain

DSO doesn't spike — it creeps

THE POST

Your DSO didn't spike. It crept.

Nobody notices 45 → 48 → 52 days. There's no alarm, no red screen. Just one quarter where cash feels tighter and you're not sure why.

That's the dangerous part of AR. It doesn't break — it drifts. By the time it's obvious, you've got 90 days of cash trapped and a board asking questions.

The fix isn't heroics. It's watching the trend weekly, and chasing consistently before invoices age.

When did you last actually look at your DSO trend — not the number, the direction?

CFOs, finance leaders

#DSO

#CashFlow

#CFO

#AccountsReceivable

BREAKDOWN

HOOK — CORRECTION OF EXPECTATION

"Didn't spike. It crept." denies the dramatic version and offers a subtler, scarier truth — the reader leans in to learn the real danger.

WHY IT WORKS

"Drifts, doesn't break" is a memorable reframe. The closing question forces self-reflection (do I watch the trend?) → comments.

STRUCTURE

Myth → the subtler truth → the consequence → the fix → reflective question.

STEAL THIS

"It doesn't break — it drifts." Slow, invisible decline is scarier than a crash. Use it for any creeping metric.

7 Levers to Actually Cut DSO

CAPTION

Everyone says "reduce your DSO." Nobody says how.

Here are the 7 levers that actually move it — in order of impact 🙌

Which one are you missing?

SLIDES

- 1 · 7 Levers to Actually Cut DSO
- 2 · Invoice the same day you deliver. Late invoices = late payments.
- 3 · Put a one-click payment link on every invoice + reminder.
- 4 · Automate consistent reminders (L1→L2→L3). The #1 lever.
- 5 · Chase by impact — the 20% of customers holding 80% of overdue cash.
- 6 · Segment tone: courteous for strategic, firm for at-risk.
- 7 · Shorten terms on new contracts; resolve disputes fast.
- 8 · DataByt automates levers 2–5 for you → databyt.in

 CFOs, Controllers, FP&A

#DSO

#FinanceMetrics

#AccountsReceivable

#CFO

BREAKDOWN

HOOK — SAYS-VS-DOES GAP

"Everyone says X. Nobody says how." promises the missing practical half — exactly what an operator wants.

WHY IT WORKS

"In order of impact" signals you've prioritised, not just listed — that's expert framing. Save-worthy.

STRUCTURE

Gap caption → ranked levers → product slide mapping which levers DataByt covers.

STEAL THIS

Rank your list "by impact." Ordering implies expertise that a flat list doesn't.

30-day building-in-public update

THE POST

30 days ago I started posting about getting B2B companies paid on time.

What I expected: a few likes, maybe a CFO or two.

What actually happened: finance leaders started DMing me their real AR horror stories. Spreadsheets held together by one person's memory. \$200K stuck because nobody followed up. DSO nobody had measured in a year.

Every conversation makes DataByt sharper — because I'm not guessing what CFOs need, they're telling me.

Building in public works. If you run finance and something here resonates, my DMs are open. I'm still learning, and you're the best teachers.

 CFOs, founders, BIP crowd

[#BuildInPublic](#)

[#StartupJourney](#)

[#Fintech](#)

[#Founders](#)

BREAKDOWN

HOOK — EXPECTATION VS REALITY

"What I expected / what happened" is an irresistible structure — the gap is the story.

WHY IT WORKS

Milestone posts invite goodwill; the specific DM details (\$200K, a year) make it real. Open DMs = a soft lead magnet.

STRUCTURE

Time anchor → expected vs actual → the insight → humble open-DM CTA.

STEAL THIS

Post a milestone ("30 days in") with expected-vs-reality. It's a reusable founder format.

The 10x math of a write-off

THE POST

A write-off is the most expensive line in finance — and the quietest.

When an invoice finally gets marked "uncollectable," it doesn't just cost the invoice amount. To replace \$50K of written-off revenue at a 10% margin, you have to sell \$500K more.

That's the real math of bad debt: every dollar you fail to collect costs you ten dollars of new sales to make up for.

Collecting what you're already owed isn't admin. It's the highest-margin revenue in your business.

CFOs, founders

#BadDebt

#CashFlow

#CFO

#Profitability

BREAKDOWN

HOOK — SUPERLATIVE + PARADOX

"Most expensive line — and the quietest" pairs extreme cost with invisibility; the contradiction pulls the read.

WHY IT WORKS

The 10x replacement math is a concrete, shareable calculation that reframes collections as high-margin revenue.

STRUCTURE

Provocative claim → the hidden math → the reframe ("highest-margin revenue").

STEAL THIS

Turn an abstract loss into a vivid multiplier ("1 lost = 10 of new sales"). Math makes it stick.

What's your DSO right now?

THE POST (NATIVE POLL)

Poll: What's your team's DSO right now?

No judgment — I'm mapping where mid-market B2B really sits in 2026.

- ☐ Under 30 days (elite)
- ☐ 30–45 days (healthy)
- ☐ 46–60 days (warning)
- ☐ 60+ days (it hurts)

Whatever you pick, I'll share the benchmark by industry in the comments.

 CFOs, AR managers

[#DSO](#)

[#Finance](#)

[#Poll](#)

[#CFO](#)

BREAKDOWN

HOOK — LABELED OPTIONS

Tagging each band ("elite / healthy / warning / it hurts") makes voting a self-identification — people love placing themselves.

WHY IT WORKS

The "benchmark in comments" promise creates a reason to return and comment, extending reach. Also pure market research.

STRUCTURE

Question → purpose framing → labeled bands → value promise.

STEAL THIS

Label poll options with identity words. "Elite/healthy/warning" outperforms bare numbers.

WEEK 6

Deepen the wound + your first customer-conversation insight

DAY 26 · MON — Pain

A liability with a job title

THE POST

Your entire collections process is one person's memory.

They know which customer "always pays late but always pays," who to call vs email, which invoice is actually disputed. It's all in their head.

Then they take a two-week vacation — and collections quietly stop. Or they quit, and six months of context walks out the door.

Cash flow should never depend on a single person remembering to follow up. That's not a process. That's a liability with a job title.

CFOs, finance ops, founders

#Finance

#AccountsReceivable

#Automation

#CFO

BREAKDOWN

HOOK — UNCOMFORTABLE TRUTH

"One person's memory" names a fragile reality the reader recognises instantly.

WHY IT WORKS

The vacation/quit scenario makes the risk concrete. "A liability with a job title" is a sharp, quotable closer.

STRUCTURE

Mirror → what's in their head → the failure trigger → the principle + punchline.

STEAL THIS

End on a reframing label ("a liability with a job title"). A vivid relabel beats a plain warning.

Anatomy of a Dunning Email That Gets Paid

CAPTION

Most reminder emails get ignored. A few get paid in 48 hours.

Here's the anatomy of the ones that work 🙌

SLIDES

- 1 · Anatomy of a Dunning Email That Gets Paid
- 2 · Subject: name the invoice + amount. "Invoice #1042 — \$8,400 outstanding."
- 3 · First line: the ask, not pleasantries. Lead with what you need.
- 4 · The amount, due date, and how late — up top, scannable.
- 5 · One-click payment link. Remove every step between them and paying.
- 6 · Tone matched to age: friendly early, firm later. Never robotic.
- 7 · One email per customer covering all overdue invoices — not five.
- 8 · DataByt writes these automatically, at the right tone → databyt.in

 AR managers, CFOs

[#Collections](#)

[#AccountsReceivable](#)

[#EmailStrategy](#)

[#CFO](#)

BREAKDOWN

HOOK — OUTCOME CONTRAST

"Ignored vs paid in 48 hours" sets a clear before/after the reader wants to be on the right side of.

WHY IT WORKS

"Anatomy of..." promises a teardown — high save value. Every line is also a DataByt capability.

STRUCTURE

Contrast caption → component-by-component teardown → product slide.

STEAL THIS

"Anatomy of [a thing that works]" is a reliable teardown format for any craft post.

"I need to care less about it"

THE POST

A CFO said something last week that I can't stop thinking about:

"I don't need help knowing who's late. I need help caring less about it."

She didn't want a better report. She wanted the whole thing off her plate — the chasing, the tracking, the mental load of wondering if cash would land.

That reframed how I think about DataByt. We're not selling visibility. We're selling peace of mind — a finance leader who stops carrying collections in their head.

The best product insight always comes from one honest sentence.

 CFOs, founders, product people

[#BuildInPublic](#)

[#Fintech](#)

[#ProductStrategy](#)

[#CFO](#)

BREAKDOWN

HOOK — INTRIGUING QUOTE

A surprising customer quote ("care less about it") creates curiosity — what did she mean?

WHY IT WORKS

Shows you listen, and repositions the product from "visibility" to "peace of mind" — an emotional, higher-order benefit.

STRUCTURE

Setup → the quote → what she really wanted → the reframe it caused → the lesson.

STEAL THIS

Let one real customer line carry the post. Quoting them is more persuasive than asserting it yourself.

Your biggest customer is your biggest cash risk

THE POST

Your biggest customer is also your biggest cash risk.

When one client is 30–40% of your receivables, their payment habits are your cash flow. They pay late, you scramble. They dispute one invoice, your month is wrecked.

Concentration feels like success — until it becomes fragility.

Two moves: watch what % of your AR sits with your top 1–2 customers, and never let a big account quietly stretch from Net 30 to Net 75 because "they're important."

Important customers still have to pay on time.

 CFOs, founders

#CashFlow

#RiskManagement

#CFO

#AccountsReceivable

BREAKDOWN

HOOK — COUNTERINTUITIVE PAIRING

"Biggest customer = biggest risk" flips a positive into a warning; the tension drives the read.

WHY IT WORKS

"Concentration feels like success — until fragility" is a quotable line; the two concrete moves make it actionable.

STRUCTURE

Flip → why it's risky → the aphorism → two moves → firm closer.

STEAL THIS

Reframe a perceived strength as a hidden risk. It surprises and teaches at once.

Agencies are a tax on broken systems

THE POST

Hot take: a collections agency is a tax you pay for a broken system.

They take 10–25% of what they recover, and they'll happily torch a customer relationship to get it. You're handing away a quarter of your own money — plus goodwill — because the chasing didn't happen earlier and consistently.

Agencies are a last resort dressed up as a solution. The real fix is upstream: chase early, chase consistently, escalate with the right tone — so invoices rarely reach "agency" territory at all.

Prevention beats recovery. Every time.

Mid-market CFOs

#Collections

#Fintech

#AccountsReceivable

#CFO

BREAKDOWN

HOOK — DECLARED HOT TAKE

"Hot take:" primes debate; calling agencies "a tax" is a provocative reframe.

WHY IT WORKS

Names an enemy category and sides with the reader's wallet + relationships. "Prevention beats recovery" lands the point.

STRUCTURE

Hot take → the cost (money + goodwill) → reframe (last resort) → the upstream fix → aphorism.

STEAL THIS

Reframe a competitor/alternative as "a tax." It flips a neutral option into a cost to avoid.

WEEK 7

Peak tension + your second vulnerability post

DAY 31 · MON — Pain

Friday 2 PM, payroll Monday

THE POST

Friday, 2 PM. Payroll runs Monday. The cash isn't there.

Not because the business is failing — because three customers who owe you \$180K just... haven't paid. You've sent reminders. You've waited. Now you're deciding whether to dip into a credit line to cover wages for work you already did and already invoiced.

No founder should spend a Friday afternoon like that. But thousands do, every week.

Your cash flow shouldn't be a cliffhanger. It should be a system.

Founders, CFOs

#CashFlow

#SmallBusiness

#Finance

#Founders

BREAKDOWN

HOOK — CINEMATIC TIMESTAMP

"Friday, 2 PM. Payroll Monday." drops you into a ticking-clock scene — instant tension.

WHY IT WORKS

Payroll panic is the most visceral AR fear. Specifics (\$180K, three customers) make it real; the closer reframes the cure.

STRUCTURE

Scene → the twist (not failing) → the impossible choice → the universal truth → reframe.

STEAL THIS

Open with a timestamp to create a scene. Time + stakes = a story people finish.

5 Signs Your AR Process Is Broken

CAPTION

Most finance teams don't realise their AR is broken until cash gets tight.

Here are the 5 early warning signs 🙌 How many apply to you?

SLIDES

- 1 · 5 Signs Your AR Process Is Broken
- 2 · You can't say your DSO from memory.
- 3 · Reminders go out "when someone has time."
- 4 · The same customers are always late — and nothing changes.
- 5 · Disputes sit unresolved for weeks.
- 6 · "AR" is a spreadsheet only one person understands.
- 7 · 3+ apply? Your collections are leaking cash. DataByt fixes all 5 → databyt.in

 CFOs, Controllers, AR managers

[#AccountsReceivable](#)

[#Finance](#)

[#CFO](#)

[#CashFlow](#)

BREAKDOWN

HOOK — DELAYED-REALISATION WARNING

"Don't realise until cash gets tight" implies a hidden problem the reader should check for now.

WHY IT WORKS

Self-diagnostic ("how many apply?") drives comments as people confess their count. High save rate.

STRUCTURE

Warning caption → 5 concrete symptoms → scoring CTA + product.

STEAL THIS

"How many apply to you?" turns a list into a quiz — quizzes get comments.

I was wrong about CFOs

THE POST

I was wrong about CFOs.

When I started, I assumed they'd want maximum control — approve every email, tweak every setting. So I built DataByt to be highly configurable.

Turns out the best CFOs want the opposite. They want to set the rules once and never think about it again. "Configurable" felt like "more work" to them.

So I'm simplifying — smart defaults, minimal setup, automation they can trust on day one. Being wrong in public is uncomfortable, but it's how the product gets better.

What's something you assumed about your customers that turned out backwards?

 Founders, CFOs, product people

[#BuildInPublic](#)

[#StartupLessons](#)

[#ProductDevelopment](#)

[#Founders](#)

BREAKDOWN

HOOK — ADMISSION

"I was wrong about X" is disarming and rare; admissions earn trust in a feed full of flexing.

WHY IT WORKS

Shows you adapt to customers, not ego. The closing question invites other founders to share — strong comment driver.

STRUCTURE

Admission → the wrong assumption → what you learned → the change → question CTA.

STEAL THIS

"I was wrong about ____" → lesson → question. A repeatable, trust-building founder post.

Net 60 is halving your cash flow

THE POST

"Net 60" is quietly cutting your cash flow in half.

Every day of payment terms is a day you finance your customer's business for free. Net 60 means two full months between doing the work and seeing the money — and customers almost always stretch it to 75+.

Most companies set terms once, years ago, and never revisit them. Meanwhile their cash is permanently parked in someone else's account.

Two questions worth asking this quarter: do new contracts really need Net 60? And are your at-risk customers earning those terms?

 CFOs, founders

[#WorkingCapital](#)

[#CashFlow](#)

[#CFO](#)

[#PaymentTerms](#)

BREAKDOWN

HOOK — QUIET DAMAGE

"Quietly cutting your cash flow in half" attaches a big consequence to a routine setting.

WHY IT WORKS

"Financing your customer for free" reframes terms as a hidden loan; challenges a set-and-forget default.

STRUCTURE

Consequence → the reframe → the neglected habit → two questions to act on.

STEAL THIS

Reframe a routine default as a hidden cost ("financing them for free"). Defaults are easy targets.

Hours/week chasing invoices

THE POST (NATIVE POLL)

Poll: How many hours/week does your team spend chasing invoices?

Honest answers only — I'm building the case that this is a solved problem.

- ☐ Under 2 hours
- ☐ 2–5 hours
- ☐ 5–10 hours
- ☐ 10+ hours (send help)

If you're above 5, that's a quarter of a salary spent on something a system should do.

 CFOs, AR managers, finance ops

[#Finance](#)

[#Automation](#)

[#Poll](#)

[#CFO](#)

BREAKDOWN

HOOK — QUANTIFY THE PAIN

Asking for hours makes the waste measurable and personal; the "(send help)" option adds levity.

WHY IT WORKS

Closing line converts the vote into your thesis ("a quarter of a salary"). Reach + research + narrative.

STRUCTURE

Question → purpose → quantified bands → cost reframe.

STEAL THIS

Translate the poll result into money in the closing line. Let the crowd's vote argue your point.

WEEK 8

Convert attention to intent — vision, reassurance, and the pilot CTA

DAY 36 · MON — Pain / Education

Do early-payment discounts actually work?

THE POST

Early-payment discounts feel smart. Usually they're not.

Offering "2% off if you pay in 10 days" can work — but most companies hand the discount to customers who would've paid on time anyway, and the chronic late-payers ignore it completely.

You end up paying your best customers to do what they already did, while your cash-flow problem (the late ones) is untouched.

A discount is a blunt tool. Consistent, escalating follow-up is a precise one — and it doesn't cost you margin.

 CFOs, finance leaders

#CashFlow

#Finance

#CFO

#WorkingCapital

BREAKDOWN

HOOK — MYTH-BUST

"Feel smart. Usually they're not." challenges a common tactic — readers want to know why.

WHY IT WORKS

Exposes the leak (paying on-time payers) and positions follow-up (your product) as the precise alternative.

STRUCTURE

Myth → why it fails → the wasted spend → blunt vs precise tool reframe.

STEAL THIS

Contrast "blunt tool vs precise tool." It elegantly elevates your approach over the common one.

The CFO's Month-End AR Checklist

CAPTION

Most month-end AR reviews are a scramble. They shouldn't be.

Here's the 6-point checklist a sharp CFO runs every month 📌 Save it.

SLIDES

- 1 · The CFO's Month-End AR Checklist
- 2 · DSO this month vs last 3 — direction, not just the number.
- 3 · CEI: did we collect 80%+ of what was collectable?
- 4 · Overdue % of AR — is it rising?
- 5 · Top 5 overdue accounts — owner + next action for each.
- 6 · Open disputes — anything stuck > 2 weeks?
- 7 · DataByt gives you all of this live — no month-end scramble → databyt.in

 CFOs, Controllers, FP&A

#CFO

#FinanceMetrics

#MonthEnd

#DSO

BREAKDOWN

HOOK — RELATABLE PAIN + PROMISE

"Most reviews are a scramble. They shouldn't be." offers relief via a ready checklist.

WHY IT WORKS

A named, reusable framework ("the checklist") gets saved and referenced monthly — pure authority + recall.

STRUCTURE

Pain + promise → the 6 checks → product as the live version.

STEAL THIS

Package advice as "the [role]'s checklist." Ownership ("the CFO's") makes it feel canonical.

Boring problems build the best businesses

THE POST

Everyone's building AI for sales and marketing. Almost nobody's building it for the unglamorous part: getting paid.

That's exactly why I'm building DataByt for it.

Sales gets the spotlight, but a sale you can't collect isn't a sale — it's a loan you didn't agree to make. The mid-market has thousands of profitable companies quietly strangled by their own receivables, with no tool built for them.

I'd rather solve the boring problem that keeps CFOs up at night than chase the shiny one everyone else is crowded around.

Boring problems, solved well, build the best businesses.

 CFOs, founders, fintech crowd

[#Fintech](#)

[#FutureOfFinance](#)

[#AI](#)

[#Vision](#)

BREAKDOWN

HOOK — CROWD VS GAP

"Everyone's building X. Almost nobody's building Y." stakes out unclaimed territory — distinctive positioning.

WHY IT WORKS

Contrarian + mission ("boring problems build the best businesses") recruits believers and frames you as a category contrarian.

STRUCTURE

Crowd/gap → why you chose the gap → the reframe ("a loan you didn't agree to make") → the mission line.

STEAL THIS

"Everyone's doing X; I'm doing Y" defines your lane in one line. Own the gap, not the crowd.

AI won't replace finance — it'll promote it

THE POST

AI won't replace your finance team. It'll get them promoted.

The fear is that automation eats finance jobs. The reality: it eats the worst parts of finance jobs — the copy-pasting, the reminder emails, the spreadsheet updates nobody enjoys.

What's left is the work that actually needs a human: negotiating with a key account, resolving a real dispute, advising the CEO on cash strategy.

Automate the repetitive 80%, and your AR person stops being an invoice-chaser and becomes a finance strategist. That's not a threat. That's a promotion.

 CFOs, finance teams, AR managers

 #AI

 #Automation

 #FutureOfWork

 #Finance

BREAKDOWN

HOOK — REASSURING REVERSAL

"Won't replace — it'll promote" flips the dominant AI fear into a benefit; a hopeful contrarian take.

WHY IT WORKS

Directly disarms the #1 buyer objection (AI threat) and reframes adoption as a career upgrade for the team that uses it.

STRUCTURE

Reversal → the fear → the reality → what's left for humans → "not a threat, a promotion."

STEAL THIS

Turn the biggest objection into the biggest benefit in line one. It defuses resistance instantly.

Month-2 recap + pilot CTA

THE POST

Two months ago, DataByt was an idea and an empty LinkedIn page.

Since then, finance leaders have told me the same thing over and over: collections is broken, manual, and nobody built a real tool for the mid-market. Every conversation confirmed the bet.

DataByt now does it end-to-end: AI chases overdue invoices, escalates the tone, manages disputes, and shows live DSO + CEI — connected to QuickBooks, Xero, NetSuite, or Sage. Live in 48 hours.

I'm still onboarding a small group of finance teams free, in exchange for feedback and a testimonial if you love it.

If chasing invoices is eating your team's week — comment "AR" or DM me. Let's fix it.

CFOs & finance leaders ready to try

#AccountsReceivable

#Fintech

#CFO

#B2BSaaS

BREAKDOWN

HOOK — HUMBLE ORIGIN MARKER

"Two months ago... an empty LinkedIn page" shows the arc; humility earns the right to ask.

WHY IT WORKS

After two months of value the audience is warm; the recap proves the thesis and the free-pilot ask is low-risk. "Comment AR" is public + frictionless.

STRUCTURE

Origin → validated learning → product in one line → free-pilot offer → frictionless CTA.

STEAL THIS

Earn the CTA with a recap of value first. The ask lands because you gave for weeks before taking.

After Day 40 — What Next

You've now run 40 weekday posts — two full months. You've moved from unknown → trusted voice → a founder people want to root for. The audience is warm and the pilot CTA is in the feed.

Month 3 onward — the Conversion phase

- **Add social proof.** Once your first pilots deliver wins, replace the founding-customer framing with real (permissioned) results and testimonials.
- **Increase founder + proof content** to ~40 pain / 25 education / 25 founder / 10 proof+CTA.
- **Run the Sales & Conversion Playbook** (Guide 04) on everyone who comments "AR", connects, or DMs — that's where followers become customers.
- **Keep the routine.** Daily: post, reply in the first 90 min, comment on 8 CFO posts, send 10 connection requests.

The only thing that decides this: consistency. Two months in, the compounding has barely started. Founders who keep going past day 60 are the ones who win — most quit before the curve bends. Don't be most.

40 POSTS DOWN

Month 1 built authority. Month 2 built trust. Month 3 converts it. Keep showing up — the audience you're building is your future customer list.
